

Health Information Exchange (HIE)

Health Information Exchange (HIE) refers to the electronic sharing of health-related information among organizations according to nationally recognized standards. HIE allows healthcare providers and patients to access and securely share vital medical information, improving the speed, quality, safety, and cost of patient care. Interoperability standards such as XDS (Cross-Enterprise Document Sharing) and MHDS (Mobile Health Document Sharing) enable centralized discovery and retrieval of patient records. HIE supports care coordination, reduces duplicate testing, and enhances public health reporting, while ensuring patient privacy and data security.
