

Health Information Management

Health information management (HIM) involves the collection, analysis, storage, and protection of patient health data. This data includes clinical notes, laboratory results, imaging studies, and administrative records. Proper HIM ensures continuity of care, supports clinical decision-making, and enables legal documentation. Electronic health records (EHRs) are now widely used to manage health information, improving accessibility and reducing errors. HIM professionals are responsible for maintaining data privacy and security in compliance with regulations such as HIPAA.
